

a lateral access to the contents therein;

wherein the depth of said container is substantially smaller than said width.

---

20(new). A humidor comprising:

a container having a height, width, and depth;

an environmental control unit within said container;

said container having one or more transparent surfaces permitting viewing of the interior thereof;

a lateral access to the contents therein;

wherein the depth of said container is substantially smaller than said width; and

wherein said humidor is adapted to mount upon a wall such that a bottom surface of said container is readily accessible to surrounding air.

21(new). The humidor of claim 1 wherein said means for controlling humidity comprises a humidifier, said humidifier comprising a water reservoir.

22(new). The humidor of claim 21 further comprising a submersible heater disposed within said water reservoir.

23(new). The humidor of claim 11 wherein said means for controlling humidity comprises a humidifier, said humidifier comprising a water reservoir.

24(new). The humidor of claim 23 further comprising a submersible heater disposed within said water reservoir.

25(new). The humidor of claim 19 wherein said environmental control unit comprises a humidifier, said humidifier comprising a water reservoir.

26(new). The humidor of claim 25 further comprising a submersible heater disposed within said water reservoir.
